1. What interests you about Software Development?

          * Why I am interest in software Development Because I am very much interested in developing a new technology and learning new things daily.

          * The interested reason is if we are good at programing we can build any software what we want.

          * And also choosing developing is one of the best carrier option so this things make me more interested in Software developing.

2. What is your career goal for the next 2 years?

          * present I don't have any carrier goals but Now I don't have any experience in programming so after 2 years I want to became a good at programming and also improve my logical thinking as well as problem solving skills too.

3. What has been your top 3 learnings from your college education (it can be any learning and not just technical learning)?

          * Before joining college I am not that much familiar with operating computers once I joined slowly I am became good friend with computers.

          *I am from ECE dept in my graduation I learn some new things in my practical's like how electrical signal works and some computer programming.

          * Before joining   I don't know what is programing I learn little bit related to programming in computer science subjects. I get some knowledge on topics like (oops, Datastrucutres).

4. Mention 2 strengths and 1 weakness of yours?

Strengths:

- I am flexible to learn any new things faster.
- I have good problem solving skills and logical thinking skills.

Weakness:

- I am little bit nervous while talking with new people but I will easily overcome once I started conversation with them.
